Plugin Sales Conditions V06

Cegid Retail Y2 – Version 26

Make more possible

cegid

Preamble

This plugin is a set of web services associated with one or more versions of Cegid Retail Y2.
This document describes its scope of implementation, as well as the changes and corrections made.
Please note: All plugin methods and services can be cited in this document. Only public methods for which the contract is published can be used by applications not designed by Cegid.

Legal notices

Permission is granted under this Agreement to download documents held by Cegid and to use the information contained in the documents only internally, provided that: (a) the copyright notice on the documents remains on all copies of the document material; (b) these documents are used for personal and non-commercial purposes, unless it has been clearly defined by Cegid that certain specifications may be used for commercial purposes; (c) documents will not be copied to networked computers or published on any type of media unless expressly authorized by Cegid; and (d) no changes are made to these documents.

1. Objectives

The objective of the **SalesConditions** plugin is to offer services relating to the management of sales conditions. It allows:

- ➔ Their management: consultation, creation, modification and deletion.
- ➔ Running the engine for a list of items to return those that are applied, or applicable.

Just remind: Only public methods for which the contract is published can be used by applications not designed by Cegid. Cegid reserves the right to modify private services without ensuring backward compatibility, and without informing users.

Documentation

The service contract documentation is visible on the IIS server(s) from the software package download page:

"Documentation" is a link that provides access to the list of documentation:

- ➔ **Web Services**
  The screen displayed provides access to the Web Services contracts and their properties
  Please note: the absence of a contract in the Web Services documentation screen means that the service is not installed or is not public.

- **Exceptions**
  This part provides access to exceptions, classified by type, and according to the plugin.

- **Installation**
  This page allows you to download Web Services installation and consumption documentation.

Y2 versions

This plugin is compatible with the following version of Cegid Retail Y2:

- Version 26

Note:
The # sign at the beginning of the plugin build number corresponds to the major version of Cegid Retail Y2.

2. MANAGEMENT

Create

➔ Objectives

The contract to create the sales conditions allows you to specify numerous properties that may be incompatible.
In interactive creation in Cegid Retail Y2, some options affect the display and options.
For example, in managing sales conditions:

- The unchecked "condition on items" option does not allow you to specify a trigger or a grouping of items.
- If the "" option is checked, it is possible to enter a trigger and also to select the grouping management option. If this last option is specified, other options may be entered.

The choice of a sales condition benefit is also closely linked to the properties to be specified.
Before creating a new sales condition by Web Service, we recommend that you check that the properties specified in the contract are compatible with an interactive entry.
This method will avoid many setbacks.

Check
This method starts with a checking phase that verifies the integrity of the information. In the event of a problem, an error code is sent to the user, otherwise the sales condition is created, subject to having the rights for it under the user restrictions.

Constraints
The creation of a sales condition sometimes requires you to specify information present in the database:

- Item, customer, store triggers
- Item list
- Markdown reasons
- etc.

This information should be known by the Web Service.
If a sales condition is created with a new trigger (the code of which is a GUID), the external system must send an existing code. The trigger must therefore be created in Cegid Retail Y2 before the Web Service is called to create the sales condition.

➔ Improvements

Disabled the "In the receipt sequence" option in the case of grouping or "X for Y" benefit.

GetDetail

➔ Objectives

The objective of this method is to retrieve the configuration details of a business operation, subject to having the rights (user restrictions).

Update

➔ Objectives

The objective of this method is to change an existing sales condition, subject to having the rights (user restrictions).
The checking phase verifies the integrity of the information transmitted with that of the sales condition. In particular, "Close" can be used as information to close a sales condition.
This update can be carried out in two ways:

- Return all information on the sales condition, which ensures better consistency of data across the information.
- Only return amended information, with the risk of generating an inconsistent sales condition if it has been changed in the meantime in Cegid Retail Y2.
  Note: this partial change remains relevant in the event of "closure", change in the period, etc.

➔ Improvements

Delete

➔ Objectives

The objective of this method is to remove an existing sales condition subject to having the rights (user restrictions).

GetListDetail

➔ Objectives

This method has the following objectives:

- To be able to detect if a store does not manage any sales condition, in order to avoid calling the service in a checkout software.
- To be able to detect if a keyword corresponds to a sales condition available in the store, which makes it possible to inform the user (and the customer) in the event of rejection (expired date, unauthorized store, etc.)
- Be able to list the sales conditions in a given environment, to inform the user (and the customer).

Examples:

- List of the week's new promotions
- List of promotions available for a customer
- List of the store's promotions

Business rules

- The sales conditions respecting the input criteria are returned if you have the appropriate rights (user restrictions.)
  If the information ID (code of the sales condition) is specified, the search is made on the exact value transmitted. If the code is unknown, it is returned in the reply with empty information.

➔ Improvements

3. ENGINE

Evaluate

➔ Objectives

The objective of this method is to run the sales conditions engine on a list of items in order to return the conditions that are applied, or applicable.
It allows the generation of sales conditions to be reproduced in entering Cegid Retail Y2 cash collection, with the same engine being used.

➔ Improvements

For quantities with decimals (less than 1), the sales condition with maximization (on net or base price) is triggered. We avoid considering the prorated price calculation as a discount, so that the maximization calculation no longer considers the price recalculation as a discount, and the sales condition can be triggered.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	11/20/2023	1310351	PRB0134328	202955	#5:11 AM	

When recalculating sales conditions after entering the payment method, sales conditions other than gift certificates are no longer excluded.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	1/5/2024	1352290	PRB0136342	214824	#5:34 AM	

Correction made to take into account in the store trigger the exact value of the user-defined table (example 25) and of the user-defined store table (example 5). 5 was contained in 25, but that's not what we want.
Fixed cases: Is in, is not in

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	2/12/2024	1040574	PRB0137712	226014	#5:55 AM	

The receipt discount distribution was not correct for a receipt with 2 lines. The 1st line was made up of more than a quantity on which part of the quantities were discounted through a same condition. A second sales condition applies to both lines, but the order of the discounts did not respect the order of the lines and caused a poor distribution of the receipt discount. Problem fixed.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	3/5/2024	1419489	INC0129521	234739	#5.63	

Due to a rounding problem when splitting the lines, and recalculating sales conditions, after the deletion of one of the conditions, the first lines were no longer discounted. Problem fixed.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	3/8/2024	1422759	INC0130393	235972	#5.67	

The incentive message is no longer displayed if a sales condition is not triggered.
In a multi-level context, the number of missing items in the incentive message was wrong. Problem fixed.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	5/17/2024	1485931	INC0182836	259301	#5.115	

Correction in the case of groupings where the second condition took into account the item discounted by the 1st condition, instead of the non-discounted item.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	9/13/2024	1552212	INC0189005	298661 295665 298677	#5.158	

To sort conditions of the same level, if the priority is the same, conditions are sorted from the discounted amount of the previous levels and no longer from the discounted amount of the sales condition alone.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	9/20/2024	1552212	INC0189005	300867	#5.168	

Correction to take into account all receipt lines meeting the criteria of the business condition for the latter to apply.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	1/22/2025	1688671	INC0208511	347479	#5.206	

In a receipt, for 1 line of 3, the number of items meeting the condition (i.e,the 3) is searched for. As the condition is defined by range, this number of items is used to find the number of loyalty points to be applied. With patch 1688671, the number of items meeting the condition was incorrect if there were several ranges. Problem fixed.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	4/15/2025	1758551	INC0218559	387353 391191	#5.242	

In a shopping cart containing items eligible for a sales condition of type XforY, the addition of an item which, although eligible for the condition, does not belong to the same membership criterion, and no longer prevents the sales condition from being triggered for the other items meeting this criterion.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl

FDE	9/24/2025	1961011	INC0256495	421408	#5.276	

(ManagementService) – We now use the StoreId passed as a parameter to list the sales conditions associated with the store passed as a parameter.

Dev	Date	CEGID's Ref.	Pb Ref.	Pull request	Plugin Build no.	Quality Ctrl
FDE	12/5/2025	2015196	INC0270534	440777	#5.303	

4. OTHER

Net Framework 4.8

Following Microsoft's announcement about the "end of support for .NET Framework 4.5.2, 4.6 and 4.6.1 as soon as April 26, 2022" the plugin now requires the installation of the .Net Framework 4.8 (runtime) on server components.
